Q: What is changing?

A: Commercial Operators that are UL listed will require:

- Constant Pressure on the close button
- The connection of a Monitored Reversing Device (ex. edge or photo eye) when wired for momentary pressure to close.

Q: Does this apply to service on older operators?

A: No, the standard only applies to manufacturers. Older operators are not required to comply with the new standard however; we recommend it for safety precautions.

Q: Will installing a 4-wire edge bring an older operator up to the new 2010 UL325 standard?

A: No, but it will enhance the safety of the door system.

Q: Can I install a sensing edge and a photo eye?

A: Yes, according to UL325, as long as at least one of the devices is monitored.
